## DIACLONE MONOCLONAL ANTIBODY DIVERSITY

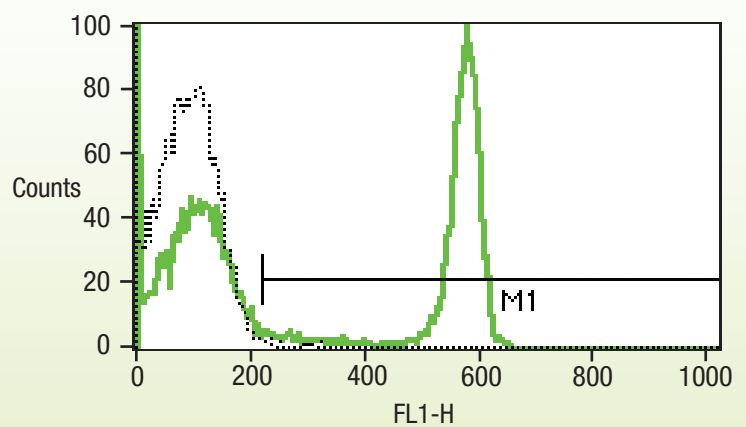

Diaclone mAbs are highly specific, high quality mouse monoclonal antibodies for a broad range of proteins. These mAbs are available in a variety of formats including labelled and unlabelled with different species specificities which can be utilised in an extensive application range.

The Diaclone catalogue covers a broad range of immunological proteins including human CD antigens, Cytokines, Cytokine/Chemokine receptors, Adhesion molecules and Apoptosis related antigens.

In addition to the extensive antibody range available Diaclone has expanded upon its reputation and experience in antibody production to offer excellent customer support services including custom antibody production, discussion of detailed technical applications and the availability of bulk antibody production for clients involved in large scale studies.

*A dual staining obtained with the B-B11 anti-CD3 FITC (FL1) and the B-D3 anti-CD19 PE (FL2) on monocytes*

*A membrane staining pattern obtained with the B-A1 FITC anti-CD4 monoclonal antibody on PBL*

## VALUABLE INVESTIGATIVE TOOL

The use of monoclonal antibodies remains a powerful tool for the investigation of innate and acquired immunity in many fields of research. To support the need for research advancement Diaclone has developed an extensive antibody catalogue with a broad range of monoclonal antibodies available for use in assay development through to large scale clinical trials.

## FLEXIBILITY

- Wide range of highly specific mouse anti-human antibodies
- Available for intracellular and cell surface membrane analysis
- Can recognise both recombinant and natural proteins acting as neutralizing, agonistic and enhancer antibodies
- Antibody performance is validated to ISO:9001 standards
- Wide range of formats, azide free, purified and conjugated
- Isotype Controls available to assess non-specific binding in assays

## APPLICATION RANGE

- Our optimised conjugated mAbs ensure consistent, reliable and specific cell staining in any field of application including;
  - Immunohistochemistry
  - Western Blot
  - Immunoprecipitation
  - Flow Cytometry
  - Biological Assays

With the benefits of high specificity, high sensitivity and excellent customer service combined with the diversity of the product range, Diaclone Monoclonal Antibodies are the clear choice to...
